Sample spacing and the number of Perron peaks
Sample 44 (1 Perron peak)
SD 1.0032; |skew| 0.1787; excess kurtosis 0.1564
KDE, h = 0.10
KDE, h = 0.40
Estimated density
Sample value, centered
Sample 749 (2 Perron peaks)
SD 1.0063; |skew| 0.1727; excess kurtosis 0.1316
KDE, h = 0.10
KDE, h = 0.40
Estimated density
Sample value, centered
Perron profile at the same λ = 0.01
h = 0.127
(v(h)/maxv − 1) × 10^6
Bandwidth h (logarithmic scale)
Perron profile at the same λ = 0.01
h = 0.057
h = 0.430
(v(h)/maxv − 1) × 10^6
Bandwidth h (logarithmic scale)
Examples matched on SD, absolute skewness, excess kurtosis, and IQR/SD. Sample IDs are zero based; profiles use the existing 201-point bandwidth grid.
