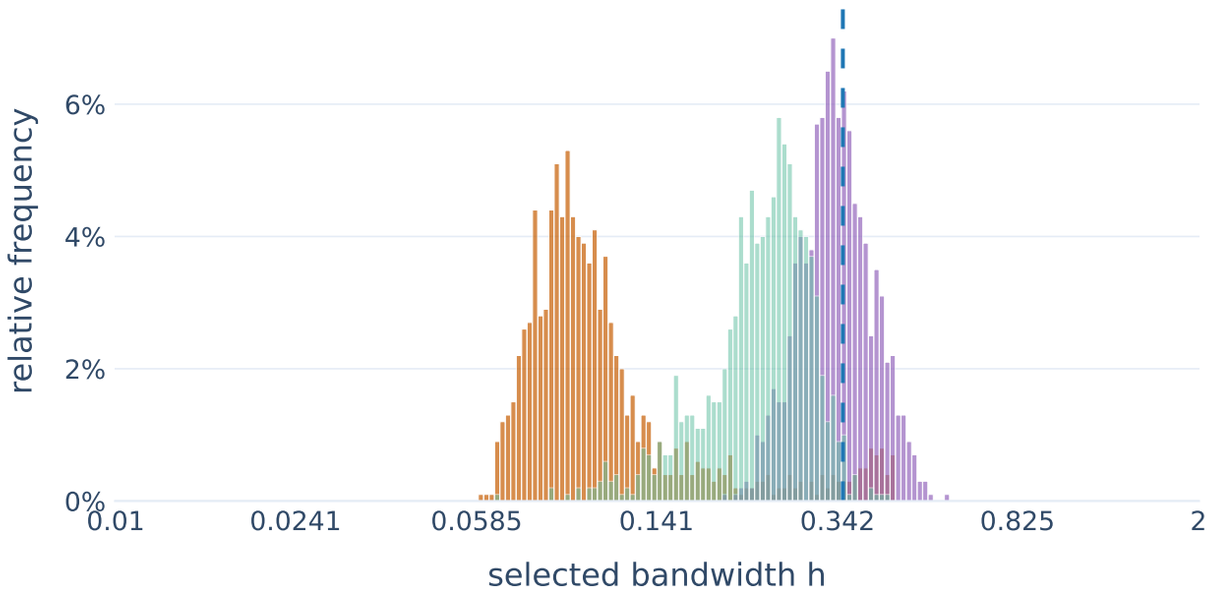
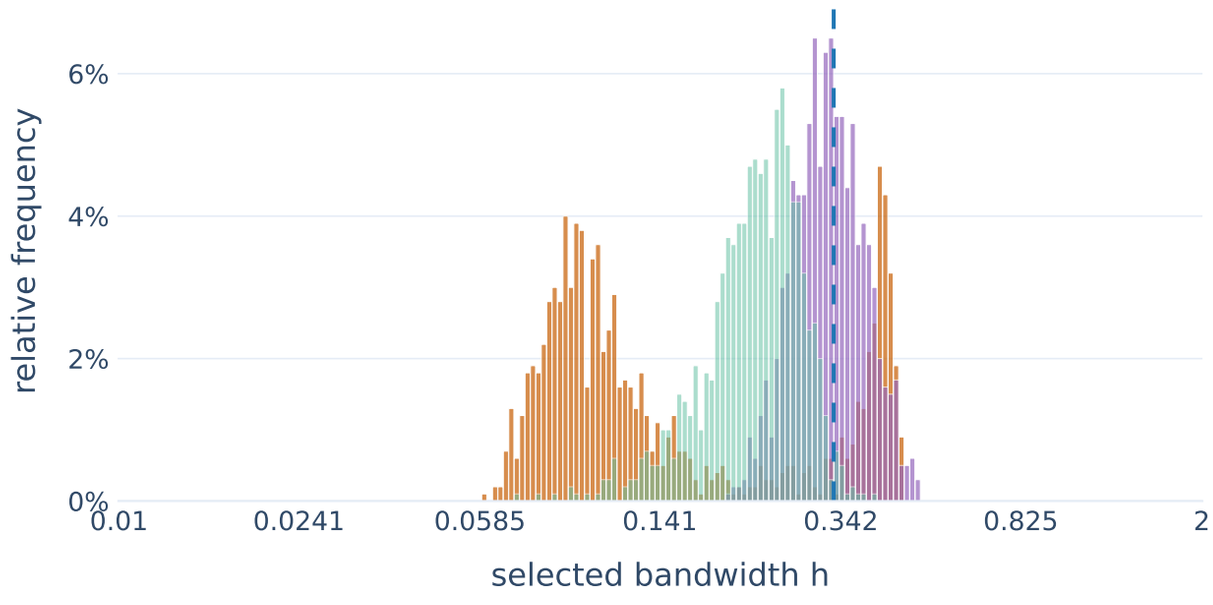
Bandwidth distributions: five consecutive grid positions per bin
$N = 1000$, $M = 1000$, $\lambda = 1$

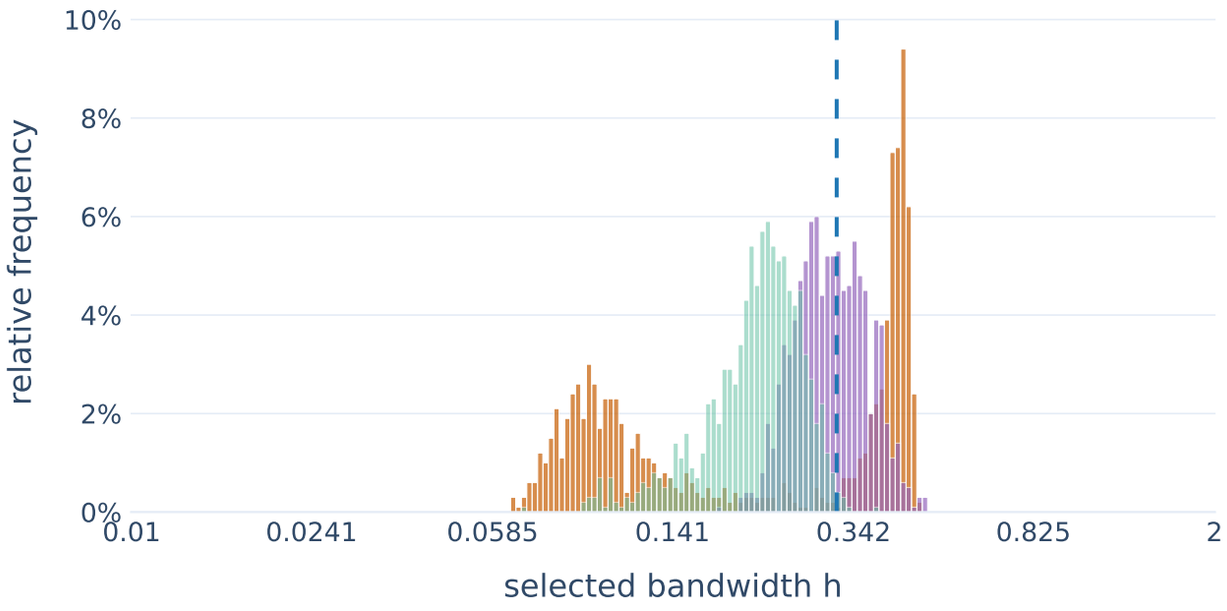
(a) $n = 300$



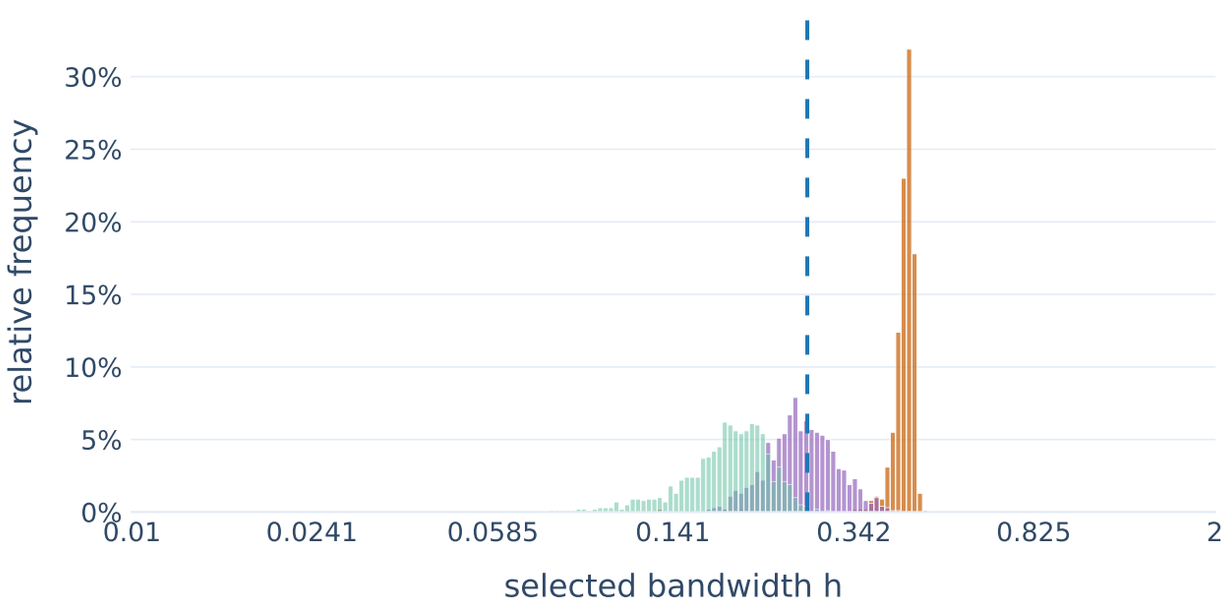
(b) $n = 400$



(c) $n = 500$



(d) $n = 1000$



spectral selections
Q-hat minimizers
ISE-optimal grid bandwidths
Gaussian MISE optimum (for each n)
