One AR(2) process: population and empirical widths with selected elbow
empirical at population direction $\widehat{w}_k(u_k^{\min})$
$\phi_1 = 0.600, \phi_2 = -0.300$
$T = 2,000, K = 10$
$\widehat{q} = 3, \widehat{p} = 2$
directional width
embedding dimension $k$
