Process wins by mean and maximum width: 100 AR(3) processes x 100 realizations per process
Separate contests across all 288 configurations; tolerances: mean=1e-08, max=1e-08
One shared bank of 100 random starts; T=500; cap 2000, patience 200, delta=1e-08; no restarts

Shared random-start bank: absolute steps
No mean-process wins in this panel

Shared random-start bank: diameter-normalized steps

Start e1: absolute steps

Start e1: diameter-normalized steps

Scale c (gamma_0 = c)

Scale c (gamma_0 = c/L)

Half-life H (beta = 2^(-1/H))

Mean-criterion process wins out of 100 (higher is better)

Highest mean-criterion process-win count across all four grids
Highest max-criterion process-win count across all four grids
Highest positive mean count within this panel, using the same global contest
