Same objective and schedule: gamma0 = 0.1, beta = 0.997 | one AR(3) path
Earlier random direction
Best original unit-direction width
Sphere
Sphere expressed in phi
Euclidean phi
Global empirical reference
Evaluated iteration (0 = starting state)
Earlier random direction
Coefficient error of best-width state
Evaluated iteration (0 = starting state)
Zero coefficients
Best original unit-direction width
Evaluated iteration (0 = starting state)
Zero coefficients
Coefficient error of best-width state
Evaluated iteration (0 = starting state)
