First 80 iterations of the failed run | dots mark accepted best-width updates
Dashed vertical lines: iterations 8 and 25; dotted coefficient lines: generating values
Accepted widths keep decreasing
Original empirical width
Evaluated iteration
Current direction
Accepted best width
Global numerical reference
Coefficient recovery can worsen at an improvement
$\|\hat{\phi} - \phi_{true}\|_2$
Current estimate
Tracked best-width estimate
iteration 25: error 178.27
iteration 8: error 5.00
The recovery denominator changes sign and gets small
u_0 (signed coordinate)
Current first coordinate
Best-direction first coordinate
Tracked coefficients jump at accepted updates
Coefficient value
$\hat{\phi}_1$
$\hat{\phi}_2$
$\hat{\phi}_3$
