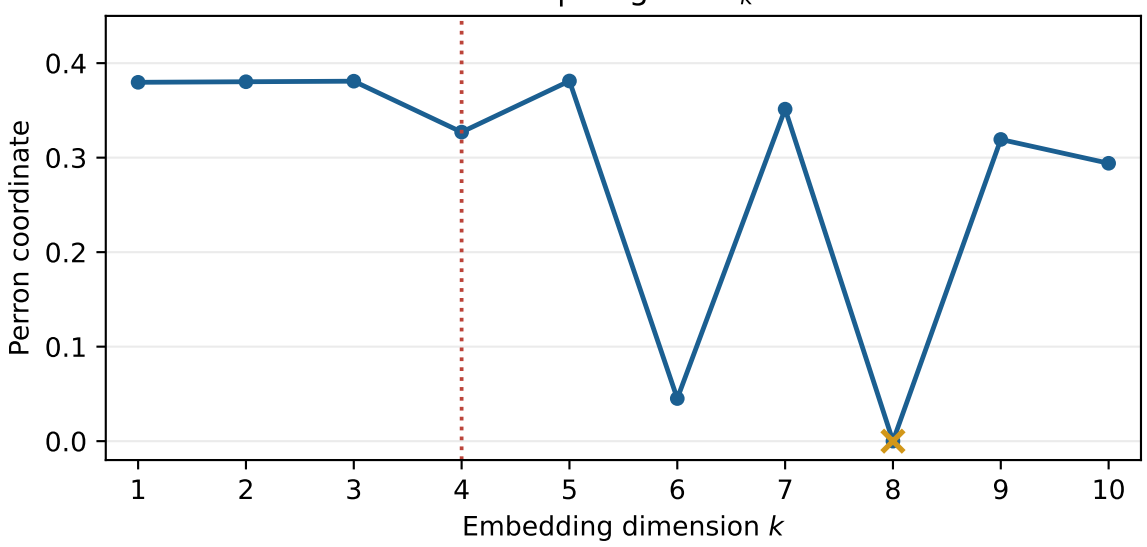
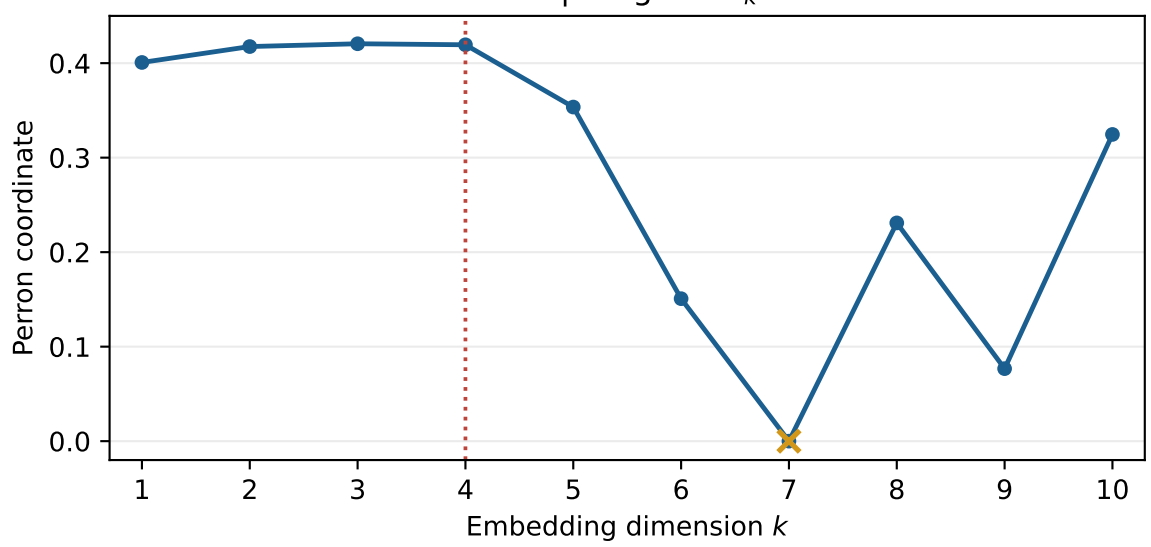
Perron vectors from flipped implied widths $a_k = \max_j \widehat{W}_j - \widehat{W}_k$

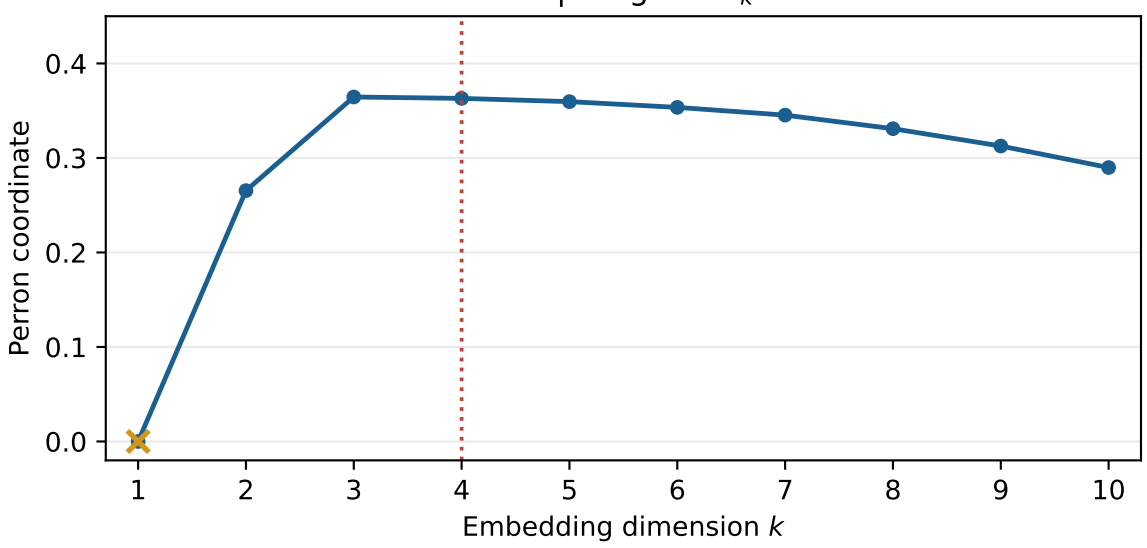
Process 01 | largest $\widehat{W}_k$ at $k = 8$



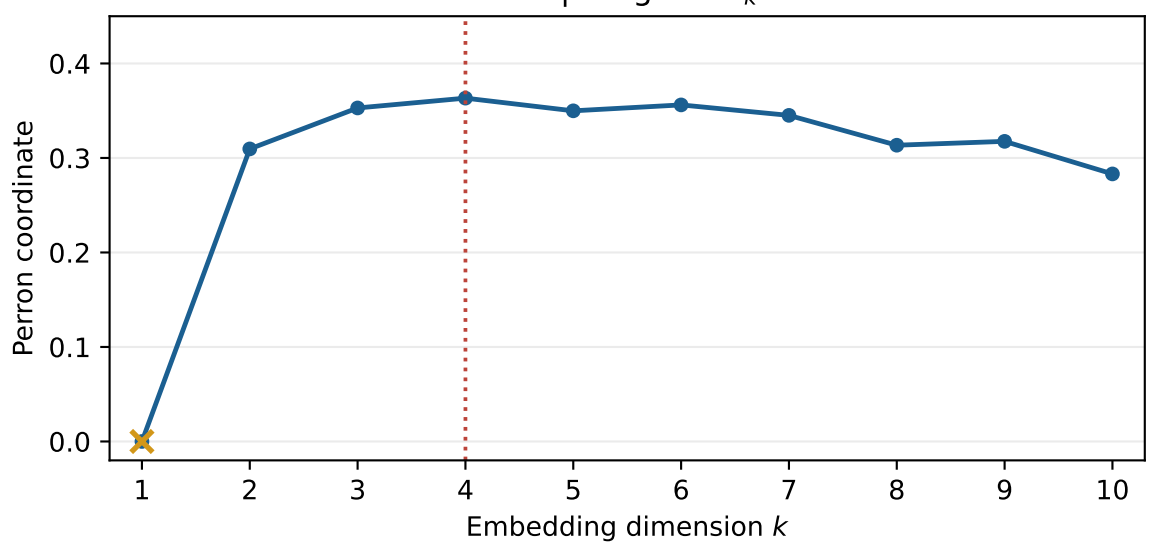
Process 02 | largest $\widehat{W}_k$ at $k = 7$



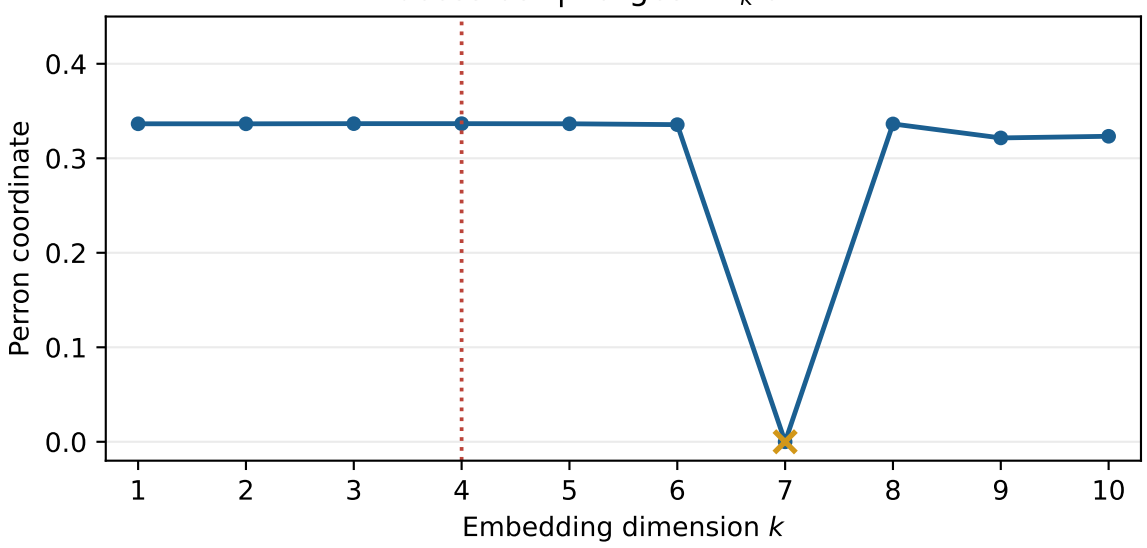
Process 03 | largest $\widehat{W}_k$ at $k = 1$



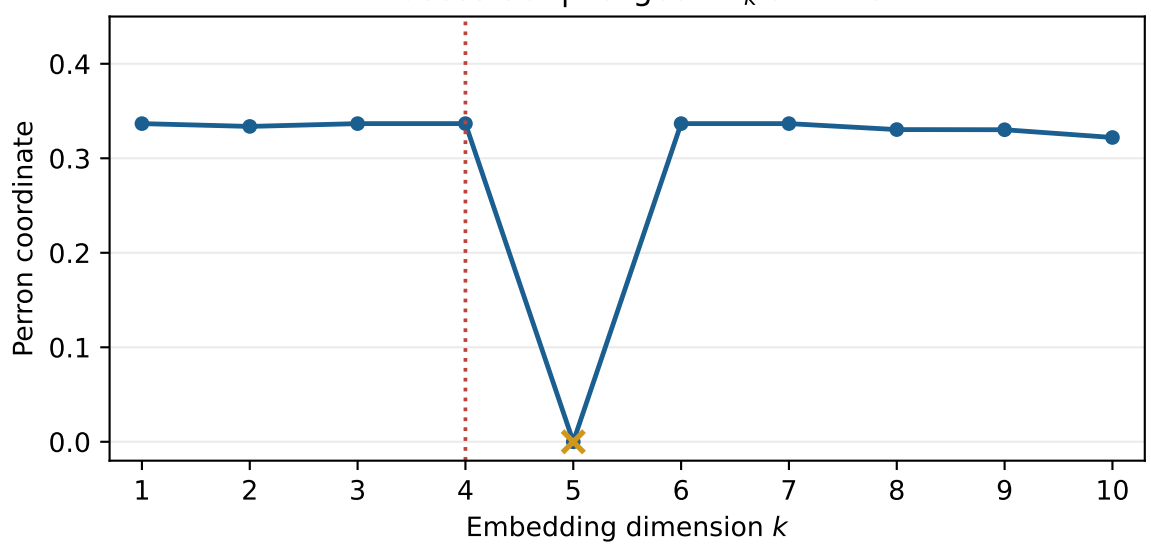
Process 04 | largest $\widehat{W}_k$ at $k = 1$



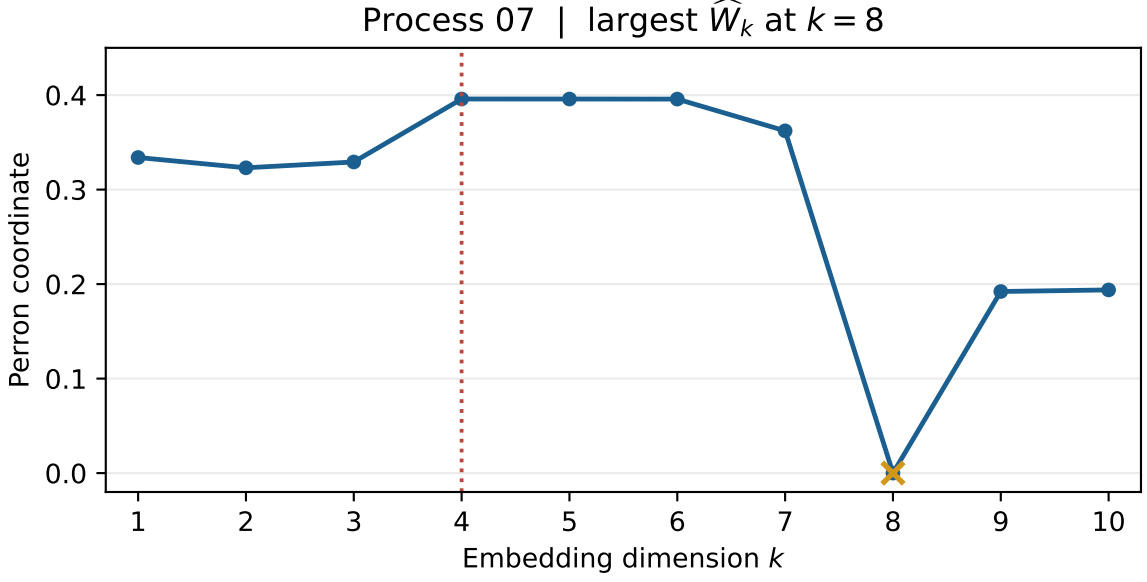
Process 05 | largest $\widehat{W}_k$ at $k = 7$



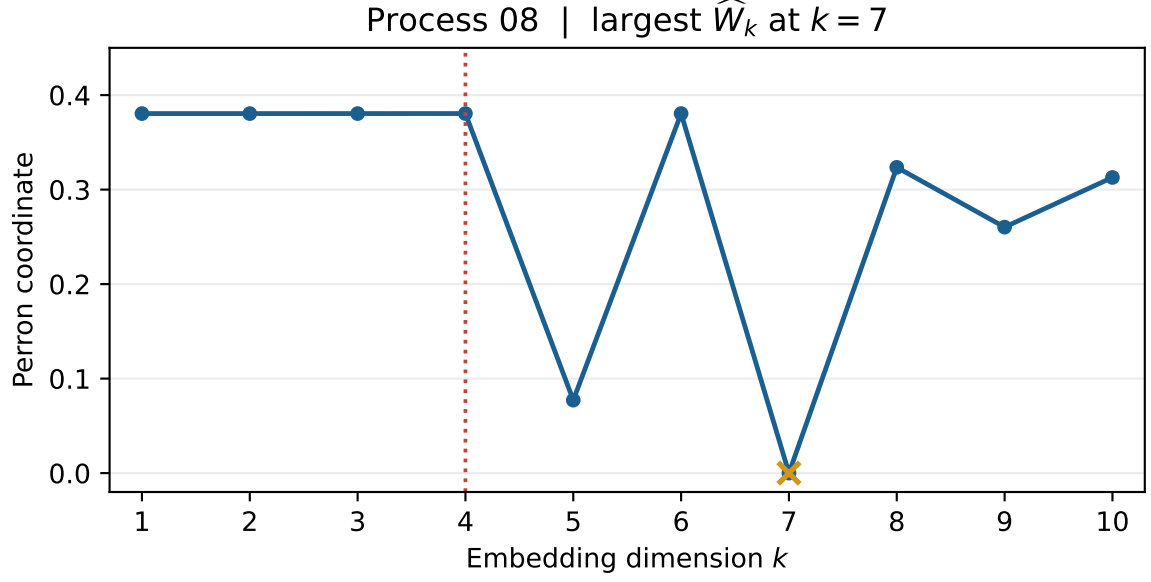
Process 06 | largest $\widehat{W}_k$ at $k = 5$



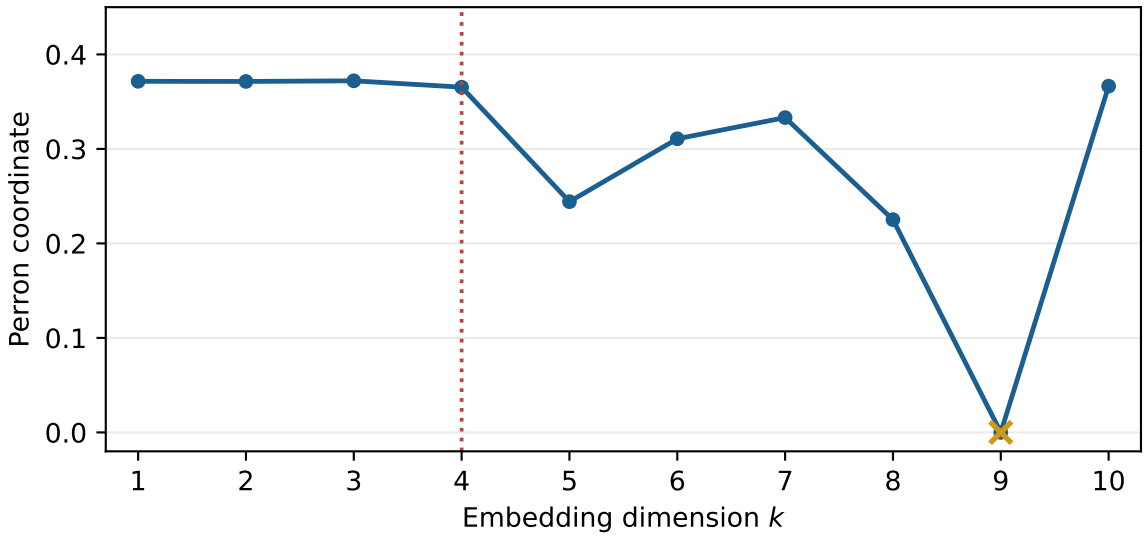
Process 07 | largest $\widehat{W}_k$ at $k = 8$

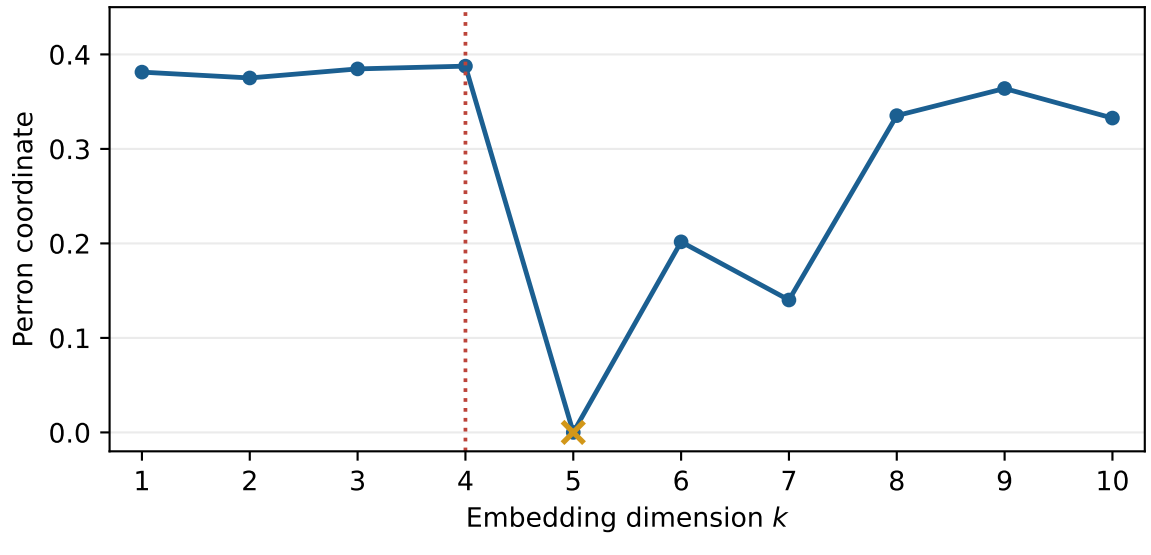


Process 08 | largest $\widehat{W}_k$ at $k = 7$



Process 09 | largest $\widehat{W}_k$ at $k = 9$





Process 10 | largest $\widehat{W}_k$ at $k = 5$
