Process wins: 100 AR(3) processes x 10 independent realizations per process
Average achieved widths within each process, then compare all 288 configurations; mean-width tolerance=1e-08
One shared bank of 10 random starts; T=500; cap 2000, patience 200, delta=1e-08; no restarts

Shared random-start bank: absolute steps

Shared random-start bank: diameter-normalized steps

Start e1: absolute steps

Start e1: diameter-normalized steps

Scale c (gamma_0 = c)

Scale c (gamma_0 = c/L)

Half-life H (beta = 2^(-1/H))

Processes won out of 100 (higher is better)

Highest process-win count across all four grids

Highest positive count within this panel, using the same global contest
