Process-win counts versus half-life: 100 AR(3) processes
10 realizations per process; winners by mean achieved width
Common reference across all four grids; tolerance=1e-08

Shared random-start bank: absolute steps

Shared random-start bank: diameter-normalized steps

Start e_1: absolute steps

Start e_1: diameter-normalized steps

Processes won / co-won (out of 100)
