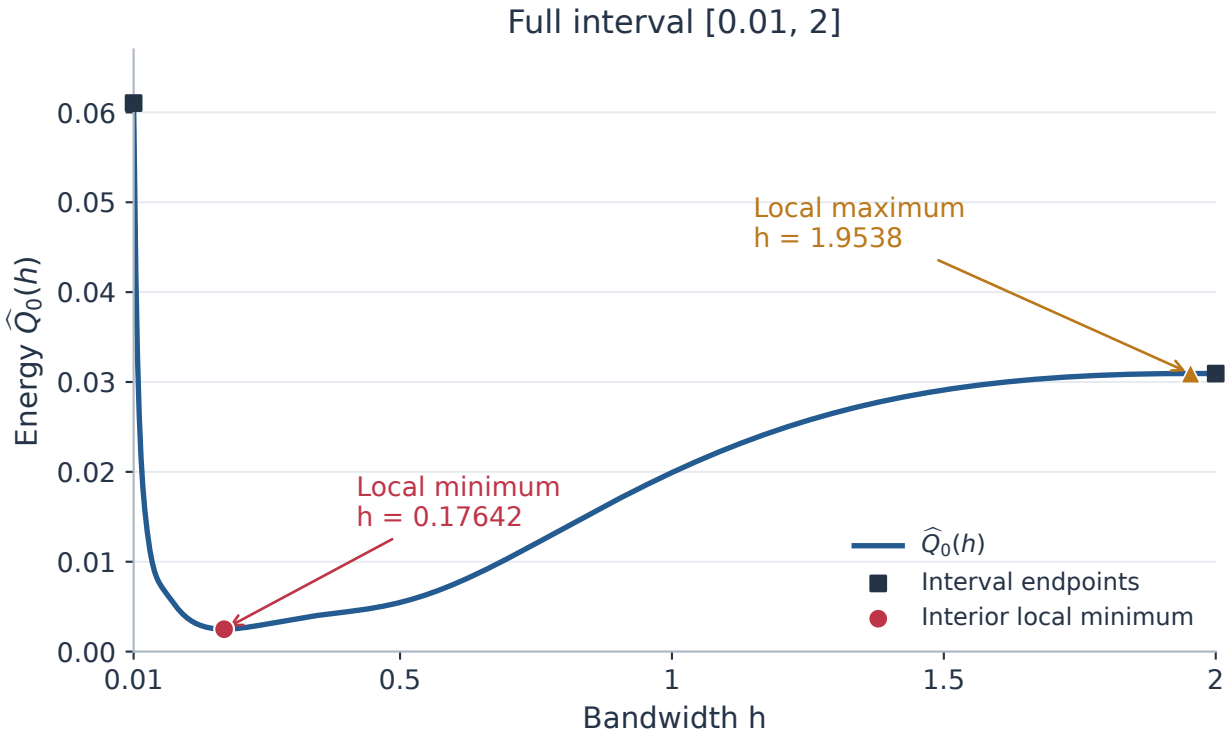
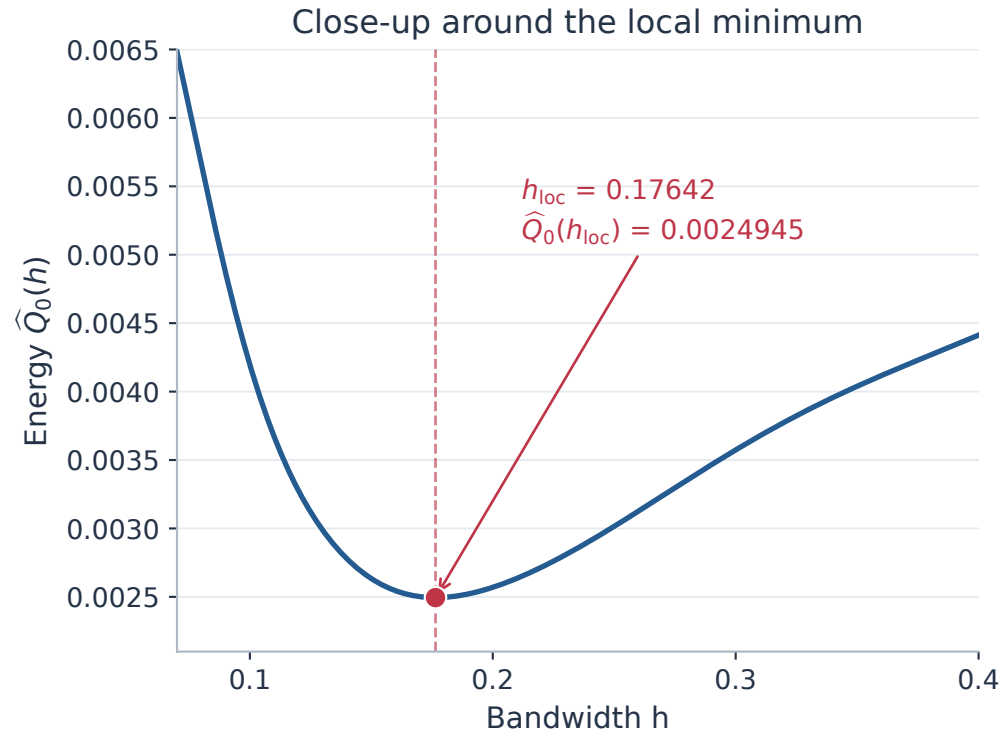
$$\widehat{Q}_0(h) = \frac{h^2}{2} \left\| \partial_h \hat{f}_h \right\|_2^2$$

Gaussian kernel KDE | fixed reference sample, n = 200 | linear axes





The marked local minimum is the lowest detected energy on [0.01, 2], including both endpoints.

Complete search: 101.5 ms (median of 9 runs after initialization; includes refinement and endpoint comparison).
