Interior local energy minimizers: 1,000 paired samples, $n = 200$
$r = 0$
with a minimum: 1000/1000
no minimum: 0
multiple minima: 240
median h: 0.2670
$r = 13/14$
with a minimum: 950/1000
no minimum: 50
multiple minima: 2
median h: 0.4120
$r = 1$
with a minimum: 896/1000
no minimum: 104
multiple minima: 1
median h: 0.4238
number of samples
interior local minimizer h
Standard-normal data; Gaussian kernel. Multiple minima: choose the lowest-energy interior minimum.
Samples without an interior minimum are excluded from the histogram and counted above.
