Thesis checklist

Reassessed 9 November 2026 | Saved thesis, 23:04 | Outstanding items

Targeted reassessment of the previous checklist against the saved thesis and benchmark files. Completed items have been removed. The full reference review remains deferred. This is not a full proof audit.

References

DEFERRED

Review references at the end

Check the Rudin bibliography mismatch and other references in the planned final reference review.

Chapter 5: 640-643; appendix: 362-390; bibliography.bib: rudin_real_1987.

Appendix - endpoint row-sum argument

OPEN

Clarify the bounds when the limit is an endpoint

Explain why the local approximation and tail estimate remain valid when the limiting bandwidth is an endpoint. For the local sum, use the full-lattice upper bound without invoking an interior-only finite-grid equality.

Appendix: 151-228, 230-258, 286-310.

Literature positioning and polishing

OPEN

Introduce the purpose and comparison criteria

Explain how cited work relates to the thesis method, distinguish precedents from contributions, and add transitions between bandwidth selection, scale-space energy and Perron-vector literature.

Chapter 5: 787-844.

OPEN

Clarify the Goldenshluger-Lepski presentation

Use consistent notation for the risk criterion and selector, define the symbols and bandwidth domain, and make the wording and assumptions of the oracle inequality precise.

Chapter 5: 794-812.

OPEN

Polish the scale-space and Perron-vector comparisons

Introduce the empirical measure and change of notation in the scale-space calculation. Clarify the Shi and Baake comparisons; define rho and the relevant normalization in the localization statement.

Chapter 5: 816-837.

OPEN

Justify the squared-weight localization claim

The claim uses a single h-star. State and use uniqueness, or formulate it for the minimizer set; in either case supply the concentration argument. The existing proposition concerns a maximum entry.

Chapter 5: 602-608, 839-841; appendix: 277-360.

OPEN

Edit language, cross-references and markers

Review the numerical comparison and literature-positioning prose, figures and notation. Resolve the 09.11 polishing markers after the associated passages are reviewed.

Chapter 5: 663-741, 787-844.

Review basis: Saved Chapter 5, appendix, outlook and bibliography; benchmark configuration and output tables. Line references reflect the saved files at this reassessment.
