Starting direction x step rule: 100 paired Jones models
Common 288-configuration reference; width epsilon=1e-08
Cap 2000, patience 200; delta=1e-08; one start, no restarts

Random start per process: absolute steps

Random start per process: diameter-normalized steps

Start e1: absolute steps

Start e1: diameter-normalized steps

Initial step gamma_0 = s

Scale s (gamma_0 = s/L)

Half-life H

Width co-winner count against all four grids (higher is better)

Highest width co-winner count across all four grids

Lowest mean coefficient MAE across all four grids
