Local energy and ISE minimizers: n = 100 to 1000

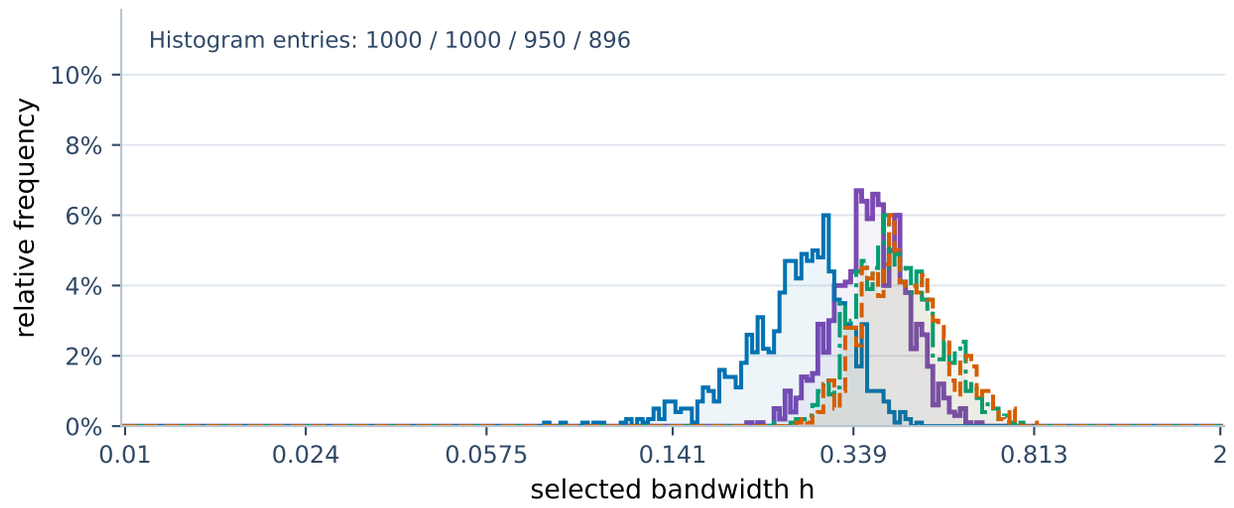

Gaussian samples; M = 1000 per n; bandwidth interval [0.01, 2]

ISE $\widehat{Q}_0$ $\widehat{Q}_{13/14}$ $\widehat{Q}_1$

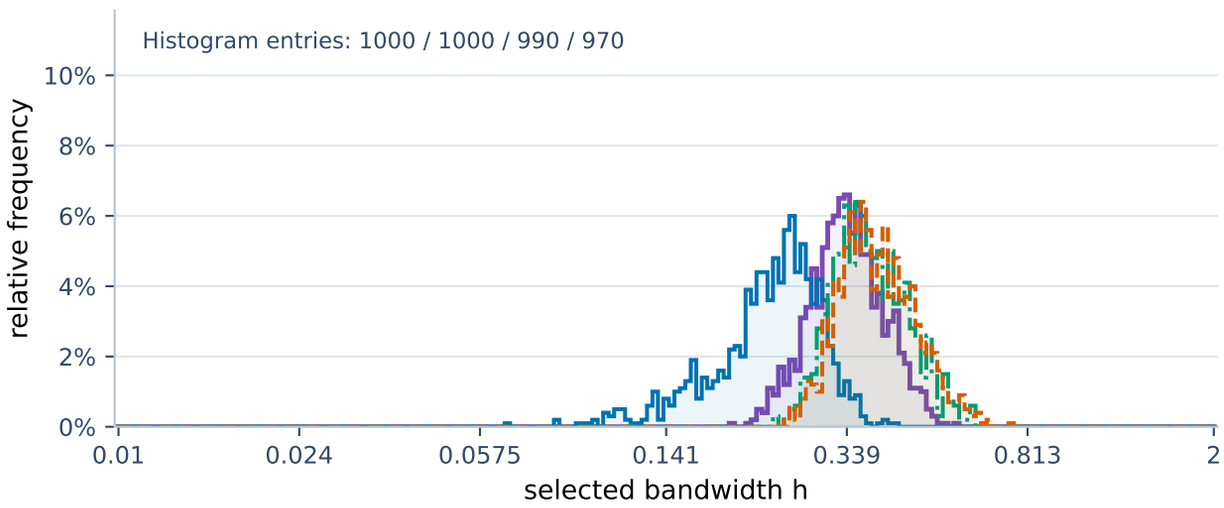

$n = 100$

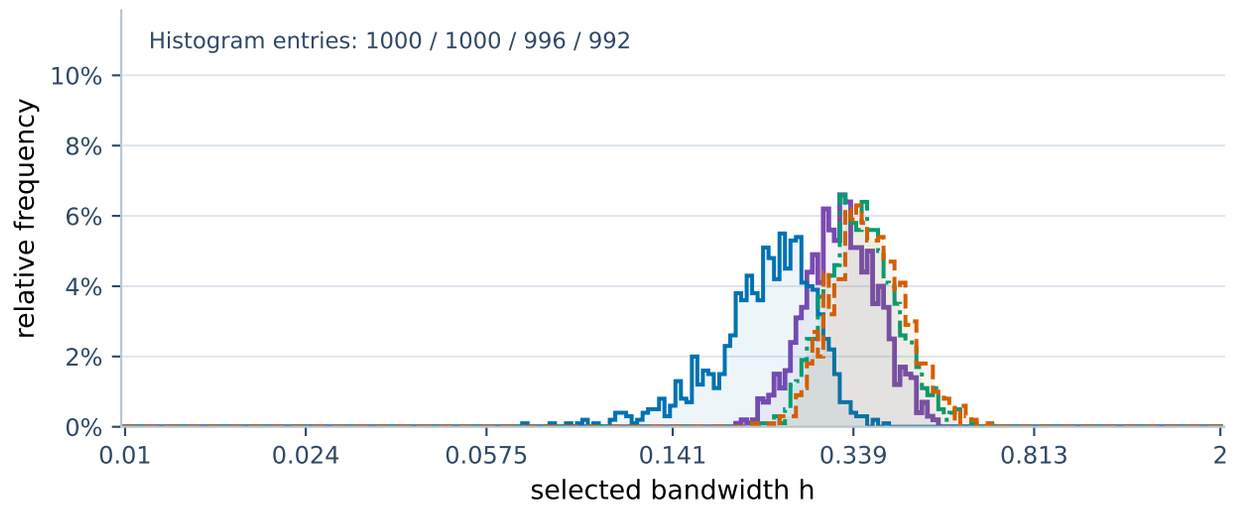

$n = 200$

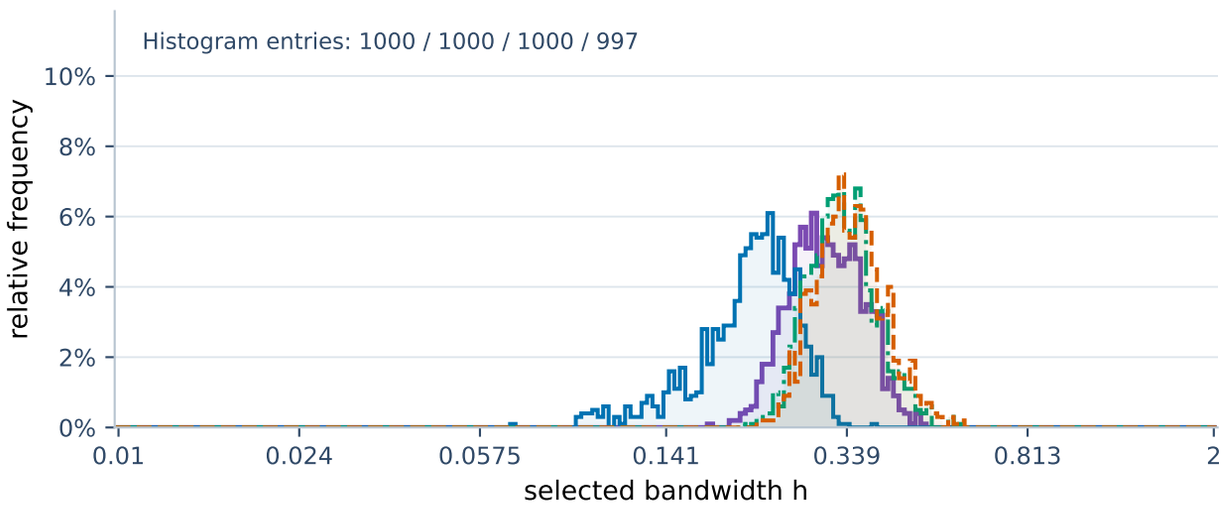

$n = 300$

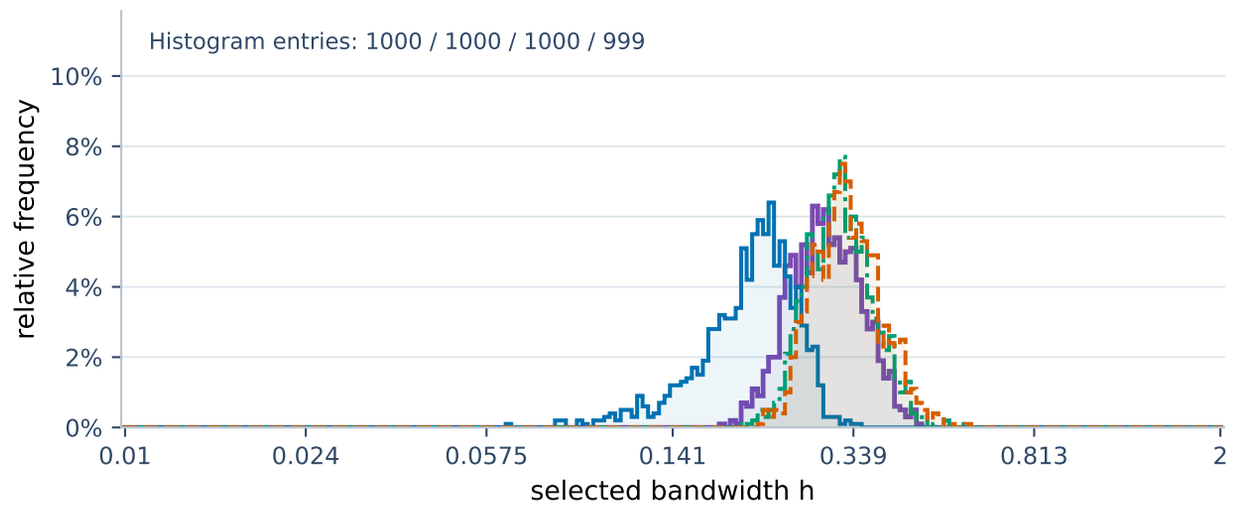

$n = 400$

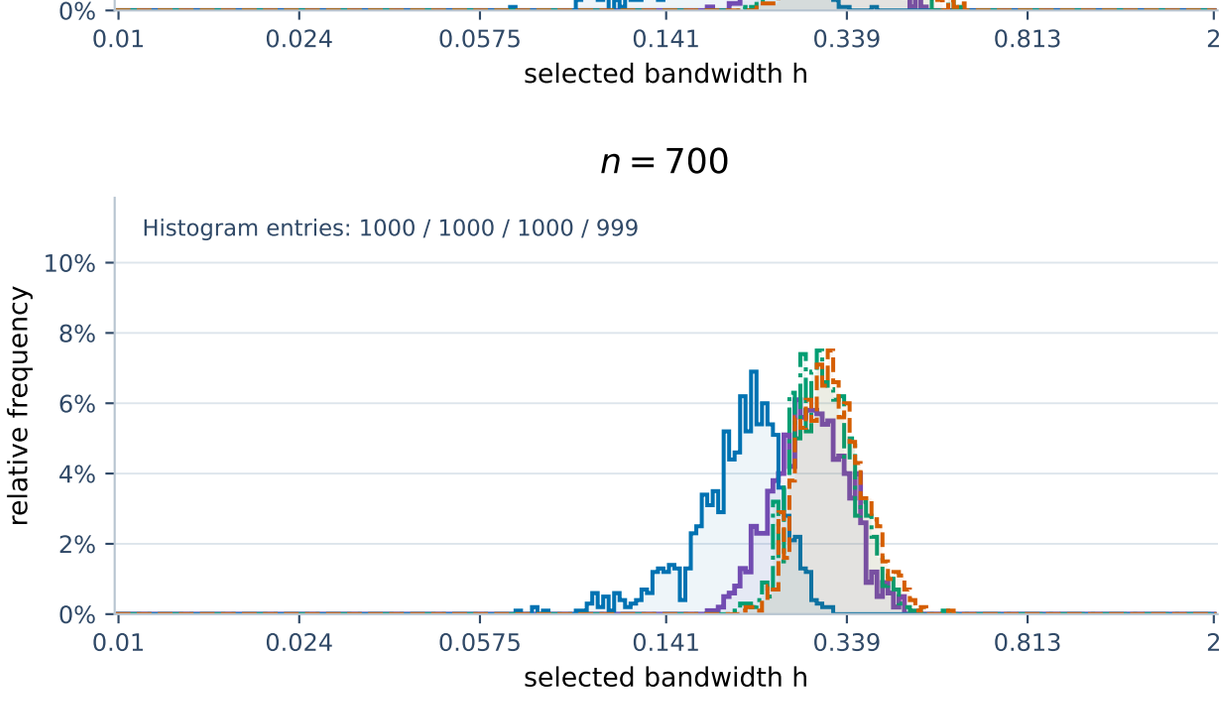

$n = 500$

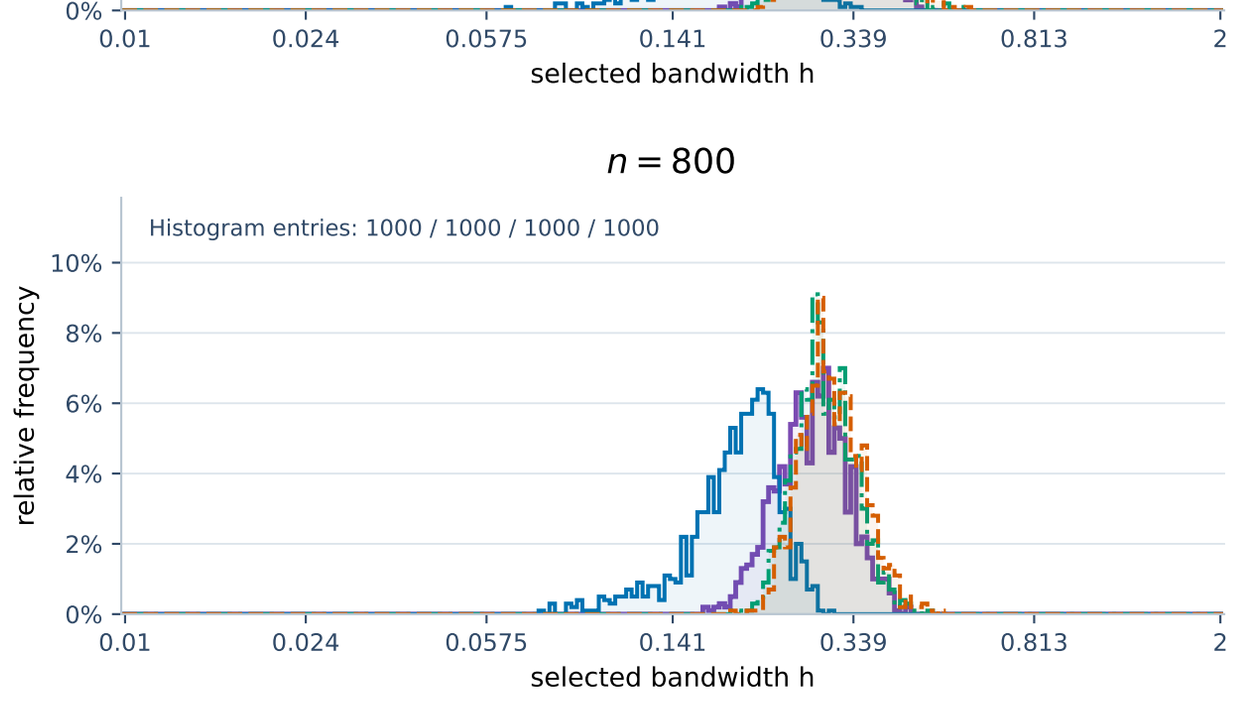

$n = 600$

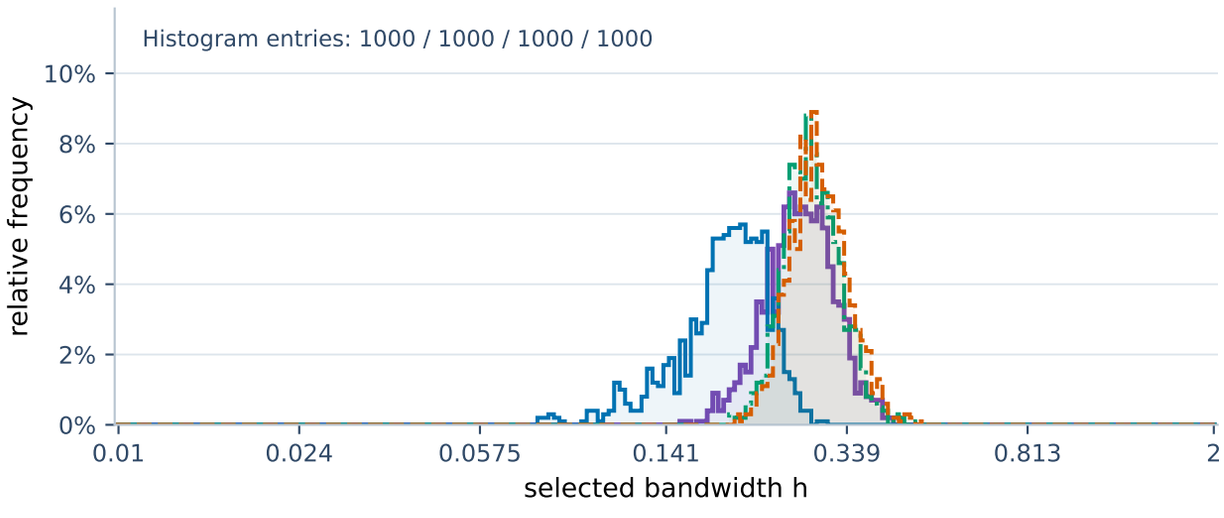

$n = 700$

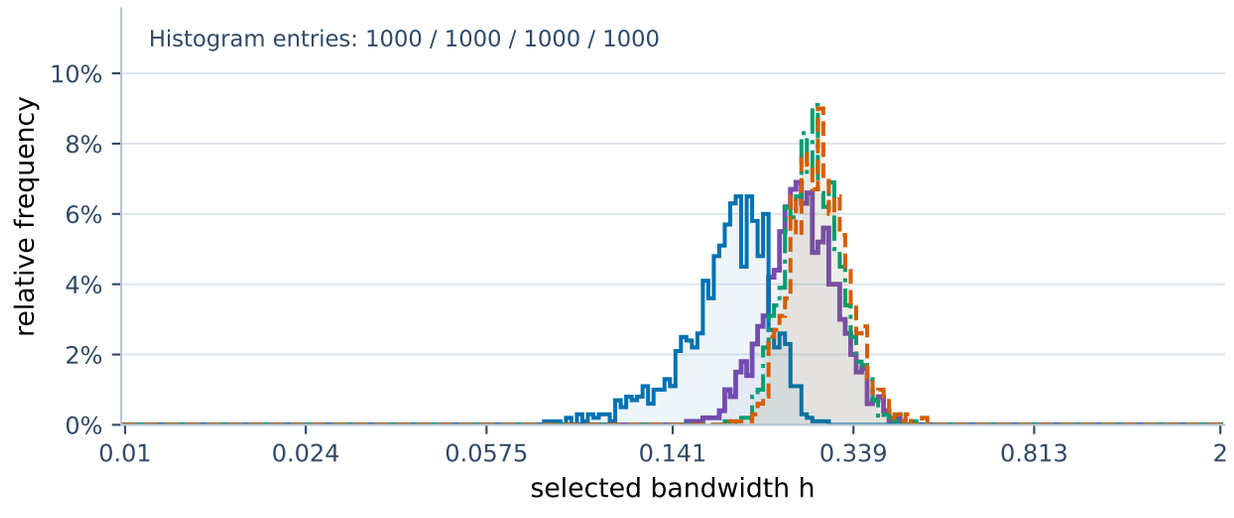

$n = 800$

$n = 900$

$n = 1000$

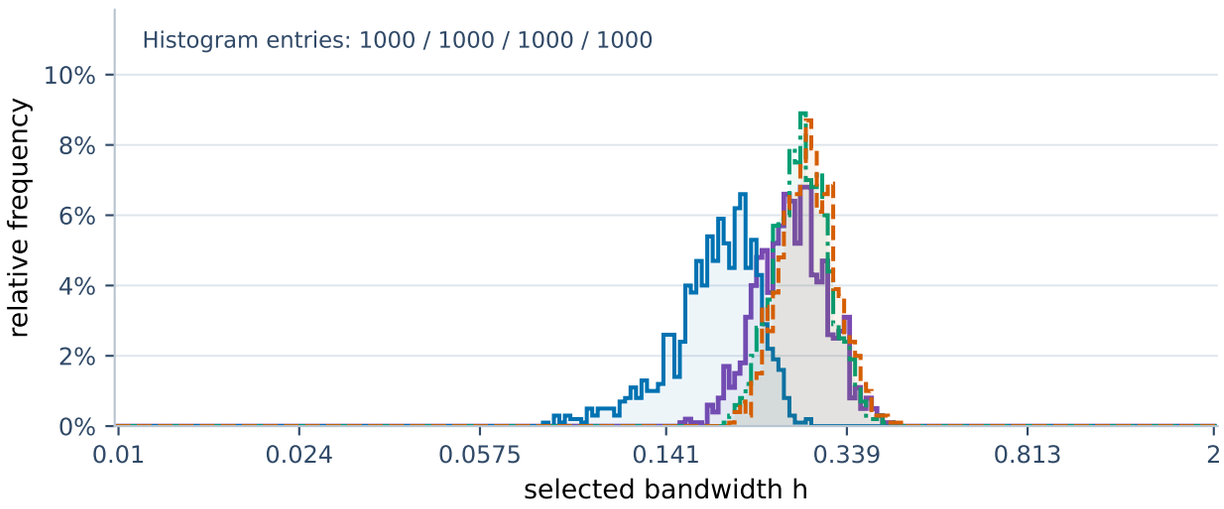

$\widehat{Q}_r$: lowest-energy interior local minimum. ISE: numerical minimum over [0.01, 2].
Frequencies divide by all 1,000 samples; missing local minima contribute no entry. Counts follow legend order.
