Process wins: 10 AR(3) processes x 10 independent realizations per process
Average achieved widths within each process, then compare all 288 configurations; mean-width tolerance=1e-08
One shared bank of 10 random starts; T=500; cap 2000, patience 200, delta=1e-08; no restarts

Shared random-start bank: absolute steps
No process wins in this panel

Shared random-start bank: diameter-normalized steps

Start e1: absolute steps
No process wins in this panel

Start e1: diameter-normalized steps

Scale c (gamma_0 = c)
Scale c (gamma_0 = c/L)
Half-life H (beta = 2^(-1/H))
Processes won out of 10 (higher is better)
Highest process-win count across all four grids
Highest positive count within this panel, using the same global contest
