AR(3): coefficients updated at each new best width | Earlier random direction
gamma0=0.1, beta=0.997; original sphere updates retained
Coefficient 1
Tracked estimate at best width
Generating coefficient
$\widehat{\phi}_1$
Evaluated iteration (0 = initial state)
Coefficient 2
$\widehat{\phi}_2$
Evaluated iteration (0 = initial state)
Coefficient 3
$\widehat{\phi}_3$
Evaluated iteration (0 = initial state)
Unchanged sphere objective
Current width
Best width
Original unit-direction width
Evaluated iteration (0 = initial state)
